

Plan schedules throughout your circuit from a central hub with Film Manager. Create the perfect plans for each of your cinemas supported by smooth systems, clever automation, and troves of guiding information.

Take command of your film schedules with Film Manager – a system that empowers you to create, manage, define, and plan film scheduling across your entire circuit from a centralised system, coordinating all of your cinemas' schedules together.

Highlights

- Cover every cinema in your circuit from a centralised system for all of your film programming needs.
- Support for all aspects of your film programmers' workflow – from pre-planning months in advance right up to session scheduling on the week of a new opening movie at each cinema.
- Centrally deploy planning policies so you can enforce how sessions for a film can be shown. It is a powerful tool that specifies the number and times of sessions per film, per day.
- Review real-time box office sales to adjust schedules and maximise revenues for your circuit.
- Legacy Film Programming allows you to enter distributor agreement terms to apply and calculate film hire effortlessly, even as terms and box office earnings may change from week to week.

Film programming

Film Manager features an intuitive web-based interface designed to simplify and speed up film programming and supports your programming team with the ability to plan months in advance or even make changes during the week of a new opening movie.

Through centralised control of film programming in Film Manager, you can plan holdover sheets and send them directly to cinemas. Your film programmers can work directly with the schedules at a cinema, collaborating closely with cinema managers to create schedules that suit both the circuit and the individual cinema's specific plan. Various reports on planning and schedules, across cinemas or the circuit, are easily viewed and can be set up to automatically be provided to third parties if needed.

The power of Vista Group

Film Manager integrates with several Vista Group partners to provide forecasting, data reporting, powerful and complex automation, and more to truly push the boundaries of what you can do. Integration with Vista partner software Cinema Intelligence allows for film forecasting of performance

for your circuit, so you can be provided with accurate predictions of how films can be expected to perform. From these forecasts, Cinema Intelligence can also power automatically generated schedule recommendations to optimise attendance with its proprietary forecasting algorithms. No more guessing or struggling to find a schedule that suits films when Cinema Intelligence can provide optimised expectations in its suggestions.

Integrating with Vista Group offer Numero enables access to data on film performance at a national level, which guides programmers as they make their booking and scheduling decisions. Subscribe to MX Film and integrate with Head Office to enable all of your film information and related media to be centralised and organised.

Trailer Scheduler

Another supplementary platform within Vista's film programming offer is Trailer Scheduler – a stand alone system that centralises and automates your trailer scheduling process, saving you the time and effort of manual trailer scheduling for individual cinemas, and consolidating your circuit's process of it into a single, reliable source.

By using Trailer Scheduler, you can ensure you always meet all your distributors' requirements by defining reserved trailer positions and schedule rules. Trailer Scheduler then takes these rules and reserved slots and automatically generates trailer schedules that meet all requirements for every cinema in your circuit regardless of size, location, or performance.
